Geography Knowledge map

What are the world's continents and oceans and where do I find them?

Vocabulary	
Globe	A globe is a small, round model of Earth that shows the countries, oceans, and continents.
Equator	The equator is an imaginary line that circles the middle of the Earth, dividing it into two equal halves: the Northern Hemisphere and the Southern Hemisphere.
Ocean	Oceans are vast, mysterious bodies of saltwater that cover most of our planet's surface.
Continent	A continent is a large area of land on Earth that is surrounded by oceans.
Northern /Southern hemisphere	The Earth is divided into two halves called the Northern Hemisphere and the Southern Hemisphere. Everything above the equator is the Northern Hemisphere, and everything below it is the Southern Hemisphere. In the Northern Hemisphere, you'll find places like North America, Europe, and much of Asia. The Southern Hemisphere includes countries like Australia, most of South America, and parts of Africa

Skills I need:

-Use world maps, atlases and globes to identify the continents and oceans

Comparing climates, identifying physical features
